

Diagnose the Patient Roleplay Game

Instructions: In this game one person plays the role of the doctor and the other the role of the patient. The patient takes an illness card, reads it to themselves and then acts as if they have that illness. The doctor must ask the patient questions about how they are feeling and what their symptoms are. The doctor will then give a diagnosis of what illness they think the patient has. The patient will then reveal their card to let the doctor know if they made the correct diagnosis. Players then reverse their roles and start again.
